BPMLINKS

Scheduling Software

BPMLinks has implemented an industry-leading Resource Optimization and ScheduleManagement software for the media and broadcast industry. The application has integrated modules for Event management, Crew management, Asset management, Personnel management, Scheduling resources and assets, in addition to scheduling tasks and controlling cost incurred for resources and assets. This application enables customers to reduce their operating costs, improve operation efficiency, increase utilization of resources, and thereby achieve better return on investment. The scheduling solution is a multi-tenant cloud hosted solution implemented in microservices based architecture to enable faster scalability and better performance during peak loads.
